Kabuye Dennis

Senior Frontend Developer @ apisec.ai | Full-stack JavaScript, AI
Kampala, Central Region, Uganda

Summary

At APIsec, my mission is to harness the power of full-stack JavaScript to develop robust, AI-enhanced interfaces that drive innovative solutions in cybersecurity. My proficiency in React underpins my recent contributions to user-centric designs, integrating complex data-driven insights with intuitive functionality.

Previously at Nebula.io, our team's collaborative efforts in AI-driven talent acquisition set new industry benchmarks. My role involved architecting engaging UIs that significantly enhance the recruitment process, leveraging advanced algorithms and vast datasets to connect employers with top-tier talent seamlessly.

Experience

APIsec

Senior Frontend Developer

June 2024 - Present (2 years 4 months)

San Francisco, California, United States

Accomplishments:

- Built intelligent security dashboards using React and TypeScript to visualize real-time API vulnerability analysis and security posture data.
- Developed RBAC-driven vulnerability scanning workflows integrating automated backend security analysis, improving threat detection efficiency.
- Designed and implemented interactive attack simulation interfaces for BOLA (Broken Object Level Authorization) vulnerability testing and visualization.
- Integrated enterprise API systems including Azure and Mulesoft into scalable frontend architectures supporting secure, high-volume environments.
- Contributed to AI-assisted security analysis workflows by building UI systems that surface automated vulnerability insights and threat intelligence.
- Improved user workflows by building reusable, high-performance component systems enabling faster deployment and enhanced user interaction.

Nebula.io

Senior Frontend Developer

April 2023 - February 2024 (11 months)

New York City Metropolitan Area

Nebula.io is the flagship product of Wynden Stark LLC's GQR Global Markets. It uses artificial intelligence to transform how talent is discovered, evaluated, and linked in the global market. The app's AI-driven talent acquisition module utilizes advanced algorithms to analyze extensive datasets, industry patterns, and candidate profiles, empowering recruiters to swiftly discover top talent.

Accomplishments:

At Nebula, I had the opportunity to contribute significantly to two innovative projects within the realm of talent acquisition leveraging AI capabilities:

- Digital Assistant (DA)

As part of the team involved in building the UI interfaces for DA, an AI-powered recruitment pipeline, I played a pivotal role in crafting the user interface that facilitated seamless interactions within this innovative system. DA revolutionized the recruitment process by autonomously engaging with potential talents via SMS, streamlining and enhancing candidate engagement. Utilizing cutting-edge technologies and design frameworks like React, Redux Toolkit, React Query, TypeScript, and Zustand, I ensured that the UI for DA was not only aesthetically pleasing but also intuitive and user-friendly. This allowed recruiters to effortlessly add prospective talents to a pipeline while leveraging the power of AI to engage with candidates, enhancing the overall recruitment experience.

- Sequences

My involvement in building the UI interfaces for Sequences, another AI-powered recruitment pipeline, further extended the capabilities of talent engagement for recruiters. Sequences empowered recruiters with a sophisticated toolset to create custom-curated email sequences that were sent periodically to prospective talents.

Within Sequences, my focus was on creating a seamless and efficient user interface that allowed recruiters to draft, manage, and schedule custom emails tailored to individual candidates.

Andela

Software Engineer

December 2019 - February 2024 (4 years 3 months)

Uganda

Full-stack JavaScript developer (ReactJS, ExpressJS and NodeJS)

- Worked with ReactJS, ExpressJS, NodeJS, PHP, MongoDB, Python,

Frontdoor, Inc.

3 years

Frontend Engineer - On-demand Customer Experience Team

January 2022 - April 2023 (1 year 4 months)

Tennessee, United States

- Improved product esthetics to build a more customer-centric and a data-driven customer experience
- Create and monitor A/B tests for different markets
- Develop new features, user interfaces, and user workflows informed by analytics and A/B Tests data

Frontend Engineer

May 2020 - April 2023 (3 years)

Tennessee, United States

[https://pro.frontdoor.com/los-angeles/service/1?](https://pro.frontdoor.com/los-angeles/service/1?sid=236&refType=1022&step=job_type)

[sid=236&refType=1022&step=job_type](https://pro.frontdoor.com/los-angeles/service/1?sid=236&refType=1022&step=job_type)

Created user interfaces for a multi-brand, industry-leading product company in the home warranty and on-demand home service business, with multiple internal and external consumer-facing web properties. trusted by 2.2 million users. Homeowners book services and the app dispatches qualified technicians. The database contains 17,000 contractor firms and 60,000 professional service technicians and has processed \$2B in claims in the last 5 years.

Accomplishments:

- Architected the end-to-end solution, technology and tooling choices, design and development workflows for the entire system from Angular/ KeystoneJs to React/NextJs, MicroUI architecture after an acquisition of a new company which improved load time from 15 seconds to 5 seconds.
- Implemented Feature switch toggle to customize service offerings for different markets and traffic levels
- Built the Promo codes feature that increased customer loyalty and increased return customers by a significant percentage.

- Built major parts of the Job Details Capture (JDC) feature that improved how the company captures job/booking details from customers and increased the conversion rate to over 11% within its first month.
- Implemented the Estimate summary module for the estimate builder on the ProPortal App

UG Tickets

Full Stack Engineer

January 2018 - January 2021 (3 years 1 month)

Uganda

<https://www.ugtickets.com/>

UGTickets is an online, multi-seller ticketing platform for event managers, tailored to and serving the local Ugandan market. Led two teams of 5 developers building end-to-end mobile and web applications using Angular7, Node.js, PHP(Wordpress), Express, and MongoDB.

Accomplishments:

- Full stack web developer responsible for web app development. Led two teams of five employees each and established front-end engineering best practices that included:
 - * Simple design with emphasis on modularity and composability
 - * Clean and maintainable code
 - * Unit tests with sensible code coverage
 - * Comprehensive, user-friendly, and up-to-date documentation
 - * Adherence to best engineering practices that decreased code duplicity by 23% and improved performance by 15%
- Developed custom plugins to make it possible for customers to buy tickets with their Mobile Money wallets(MTN MoMo Pay)
- Developing, design and implementing new Node/Express.js API endpoints as part of a high-profile customer-facing portal for both mobile and web Apps.
- Improved UG Tickets website CHI (Customer Happiness Index) by 72% through UI/UX enhancements.

Smile Charity Uganda

Web Developer

March 2013 - February 2016 (3 years)

Kampala

<https://smilecharityuganda.org/>

As a junior web developer, I developed and maintained the Charity's website

Key Features built:

- Facebook API integration resulting in a 38% increase in donations.
- User profile pages with rich CRUD operations
- image upload and gallery
- Developed the system's databases and designed database queries and joins with MySQL
- Developed the Charity's inventory system that generates expenditure reports, manages multiple users, and general purchases tracking

Education

Sikkim Manipal University of Health, Medical and Technological Sciences

Bachelor's degree, Information Technology · (2009 - 2013)
